### FUNDAMENTAL PROGRAMMING TECHNIQUES

GIT AND MAVEN

## GIT - Overview

- Distributed version control system that tracks changes of computer files and helps coordinating several people who work on those files
- Advantages
  - Keeps a track of the changes made over time
  - Allows you to revert code to its initial stable version
  - Allows programmers to select which version of the file it wants to use at any point of time
  - Synchronizes code between multiple people
- Git-based repository hosting platforms: GitLab, GitHub

## GIT – BASIC CONCEPTS AND COMMANDS

Command	Description
git init	Initializes a repository in a project's directory => creates a subdirectory named .git containing the Git repository skeleton.
git clone remote_repository_URL	Gets a copy of an existing Git repository to which you want to contribute
git remote add origin remote_repository_URL	Sets a connection to another repository
git add .	Tracks new files, stages files
git status	Shows which files are in which state
git commit –m "message"	Commits the added files to your local git repository
git push –u origin main	Sends the committed changes to your remote repository
git pull	Fetches and merges changes on the remote server to your working directory

## MAVEN - OVERVIEW

 Software project management tool that can be used for building and managing any Java-based project

- Builds a project using its **project object model** (i.e., POM) and a set of plugins
  - Project object model XML file named "pom.xml" residing in the base directory of the project
    - Contains information about the project and various configuration details used by Maven to build the project (e.g., project dependencies)
- Maven Local Repository
  - Folder located on the local machine created when you run any maven command for the first time
  - Keeps your project's dependencies (library jars, plugin jars etc.)
  - When you run a Maven build, then Maven automatically downloads all the dependency jars into the local repository
- Maven Central Repository
  - Provided by the Maven community
  - Contains a large number of commonly used libraries
  - When Maven does not find any dependency in local repository, it starts searching in the central repository

### MAVEN – CREATE PROJECT

New Project			×
Q			
New Project	Name:	PT2024_30441_Popescu_loan_Assignment	
Empty Project	Location:	C:\PT\PT2024_30441_Popescu_loan	
<i>m</i> Maven Archetype		Create Git repository	
🥖 Jakarta EE		lava Kotlin Groovy JavaScrint +	
🕝 Spring Initializr	Language.		
🕞 JavaFX	Build system:	IntelliJ Maven Gradle	
💽 Quarkus			
$\mu$ Micronaut	JDK:	☐ 21 Oracle OpenJDK version 21.0.1 🗸	
💊 Ktor	🗹 Add sample	le code	
Compose for Desktop	Generate	te code with onboarding tips	
5 HTML			
日 React	✓ Advanced S	Settings	
ex Express	GroupId: ⑦	D ro.tuc	
🍄 Angular CLI	A stife still G		
V Vue.js	Artifactid: @	<pre> [// I2024_30441_Popescu_loan_Assignment_1] </pre>	
🔨 Vite			
?		Create	el

## MAVEN – PROJECT STRUCTURE

### Maven Project Structure

### A Maven project must also adhere to a standard directory structure.

MAVEN STANDARD DIRECTORY LAYOUT (FRAGMENT)			
src/main/java	Contains Java code files		
src/main/test	Contains test java code files		
src/main/resources	Contains images/properties files		
(For the complete directory layout check this link)			

### MAVEN – POM.XML

### The ID of the project's group,

The ID of the project -

The version of the project -

Specifies the type of artifact that the project produces (e.g., jar, war, etc.)

Junit dependency

Adding the maven-jar-plugin -

	xml version="1.0" encoding="UTF-8"?
	<project 4.0.0="" http:="" maven-4.0.0.xsd"="" maven.apache.org="" pom="" xmlns="http://maven.apache.org/POM/4.0.0" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instanc@&lt;/th&gt;&lt;/tr&gt;&lt;tr&gt;&lt;th&gt;&lt;/th&gt;&lt;th&gt;xsi:schemaLocation=" xsd=""></project>
	<modelversion>4.0.0</modelversion>
	<pre><groupid>ro.tuc</groupid></pre>
	<artifactid>PT2022_Test_Project</artifactid>
	<pre><version>1.0-SNAPSHOT</version></pre>

## MAVEN – BUILD LIFECYCLE

Maven 🌣 —	
G 🔩 🔩   +   > m 🦺 🕝 🎞 😤 🎉	Databa
<ul> <li>H PT2022_Test_Project</li> </ul>	ase
Y 📴 Lifecycle	m
🌣 clean	/// ⋜
🏟 validate	lave
🌣 compile	3
🌣 test	
🗘 🔯 package	
🌣 verify	
🏟 install	
🏚 site	
🏟 deploy	
> 📭 Plugins	
> Dependencies	

Phase	Description
Clean	Deletes the build directory
Validate	Validates if the project is correct and if all necessary information is available
Compile	Compiles the source code
Test	Tests the compiled source code
Package	Creates the JAR/WAR package as mentioned in the packaging in POM.xml
Install	Installs the package in the local/remote maven repository
